

**User:** in the street

**Assistant:** I need more information to answer your question. "In the street" is too vague. To advise on industrial safety, I need to know what activity is taking place in the street. For example: \* What type of work is being done? (e.g., road construction, utility repair, filming) \* What are the potential hazards? (e.g., traffic, falling objects, excavation) \* What is the location? (This helps determine specific local regulations and potential environmental hazards.) \* What are the workers wearing for Personal Protective Equipment (PPE)? \* What safety measures are in place? (e.g., traffic control, barricades, warning signs)
